

The GSG Foundation and the GS20 Token Whitepaper

The GSG Foundation is a team of committed technologists, futurists, developers, and business networks that have taken the first steps to creating an Ethereum-based wealth creation and distribution ecosystem. Through its applications, the Foundation has a goal of introducing underrepresented communities and individuals to cryptocurrency and blockchain technology so that they can benefit from the meteoric growth and gains in the crypto economy.

The GSG Foundation has developed and released a successful smart contract, called “The 80/20,” and has other Ethereum-based applications currently under development. The 80/20 Smart Contract mints an ERC-20 token called GS20 and delivers the tokens to the user’s crypto wallet when purchased. Holders of the GS20 will receive micro-payments in Ethereum when new and existing users buy and hold GS20 tokens. There was no ICO held for this project and 4% of the 80/20 contract is automatically paid to the GSG foundation and developers who are building more applications to increase the utility of the GS20 token. The remaining 96% circulates within the plan and its participants.

The 80/20 Smart Contract

The 80/20 Smart Contract is a decentralized finance (DEFI) platform that operates on the Ethereum Blockchain and provides numerous benefits to the contract participants. As defined by Nick Szabo, the computer scientist that came up with the concept, a smart contract is “a computerized transaction protocol that executes the terms of a contract.”

The 80/20 can function as a savings account, a staking platform, and an income generator through a generous referral and loyalty program. Through the 80/20 contract, participants are expected to accrue passive income; for many participants, this will be for the first time.

The 80/20 provides its users with a way to tap into the revenue-generating operation of Ethereum staking for as little as .10 Eth. Staking is nearly as profitable as the mining or trading of cryptocurrencies, and with less risk than cryptocurrency trading. Under the 80/20 Smart Contract, you stake (buy & hodl) Ethereum in order to receive GS20 tokens.

The staked Ethereum is completely consumed and divided among various holding accounts inside the contract. After distribution of 20% to sponsors, 12% to the Loyalty Program, and 4% to the GSG Foundation, approximately 64% of each Ether is used to mint the GS20 tokens.

The GS20 token is backed by Ethereum which stabilizes the value of the digital asset. All assets are withdrawn as Ethereum.

The 80/20 contract was deployed on October 25, 2020. As of January 5th, 2021, the 80/20 Smart Contract participants have deposited 1005 ETH and withdrawn 579 ETH. That represents the cycle of wealth creation, growth and distribution that the contract was intended to produce.

The GS20 token, which sold for less than \$.01 on October 25, 2020, can now be purchased for approximately \$2.81/GS20 (as of January 5th, 2020.)

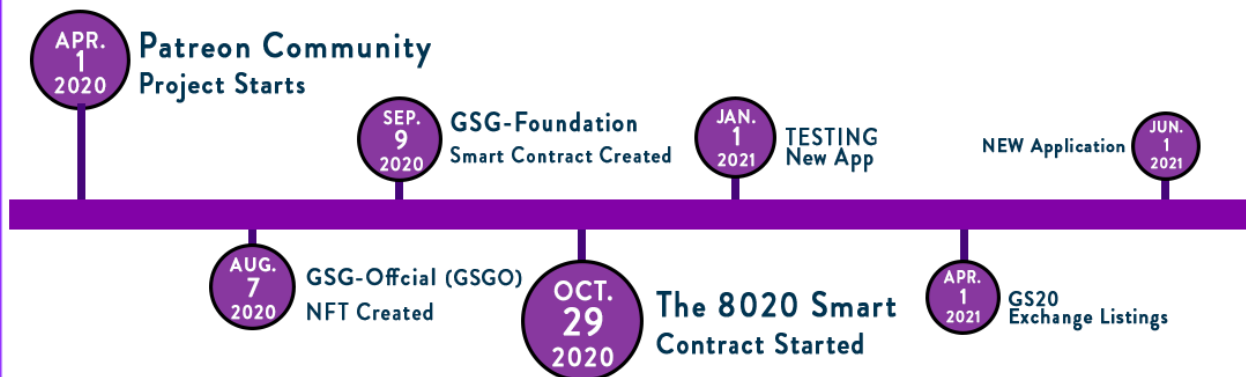

Features of the GSG Foundation's 80/20 Smart Contract

1. As explained above, the GS20's value is pegged to the value of Ethereum. It provides the participant the opportunity to support the applications being developed by the GSG Foundation while also buying into a stable digital asset at a price point that allows for substantial long-term growth. As shown by the robust withdrawal numbers, 80/20 participants are already maximizing the DEFI potential of the smart contract. The Smart Contract allows participants to cycle the ETH they have earned back into the program with one click. Re-staking is free and easy as these assets represent funds passively earned by participation in the Smart Contract.
2. 80/20 Smart Contract participants are provided with a referral link which allows them to sponsor new participants to the 80/20. If your referrals use your link to join the Smart Contract, your sponsorship confers to you a percentage of the referrals' initial investment of ETH. You will continue to earn referral commissions for three levels of referrals as the contract is promoted by those you've sponsored. These funds will appear in your account as a "Referral Commission."
3. As a member of the 80/20 Smart Contract, and a holder of GS20 tokens, you will receive a portion of the ETH paid out for every transaction made in the 80/20 Smart Contract. The dividends you receive are based on your ownership percentage of the total supply of GS20 tokens. These dividends update in real time on the Smart Contract and will appear in your account as "Your Dividends earned."
4. The Loyalty Pool. If a member of the 80/20 Smart Contract holds 2,000 GS20 tokens, they receive approximately *three times the dividend* they would normally receive *and* they continue to receive the normal dividend based on their ownership percentage of the GS20 token supply. These funds will appear in your account as "Your Loyalty Bonus earned."
5. The 80/20 Smart Contract is unique in that commensurate with your level of participation, you have the power to directly influence the value of your stake. The GS20 token value increases (and decreases) based on the value of Ethereum but it also increases as additional tokens are minted (via Ethereum staking) and decreases when GS20 tokens are sold.
6. When GS20 tokens are bought the total supply and price will increase for the next participant. When users sell GS20 tokens, they are burned and the total supply and price is decreased. This means that total supply and circulating supply will always be equal because tokens can only be created or destroyed by the user. The GSG Foundation does not hold any tokens in reserve and must acquire tokens by depositing Ethereum into the contract like all 80/20 contract participants.

GSG Foundation Near-Term Plan

The above timeline includes the GSG Foundation release schedule, including tentative release dates for new applications under development. All projects are either complete or have an anticipated release date. A key goal for 2021 is to list the GS20 on public exchanges.

The GSG Foundation's long-term plan is to continue building decentralized applications that aid in wealth creation and preservation. The foundation's applications and solutions will always promote transparency, wealth creation and distribution. The Ethereum blockchain and smart contracts make this possible.

This Whitepaper has been released to encourage participation in the 80/20 Smart Contract. The GSG Foundation believes in the power of the blockchain and 80/20 offers an easy entrance into the crypto space. This white paper will go through several updates as this project progresses.

NOTES:

Disclaimer

Before purchasing cryptocurrency, you must ensure that the nature, complexity and risks inherent in the staking of cryptocurrency are suitable for your objectives in light of your circumstances and financial position. You should not purchase cryptocurrency unless you understand the extent of your exposure to potential loss.

Many factors outside of the control of the 80/20 Smart Contract will affect the market price of cryptocurrencies, including, but not limited to, national and international economic, financial, regulatory, political, terrorist, military, and other events, adverse or positive news events and publicity, and generally extreme, uncertain, and volatile market conditions.

The 80/20 and its affiliates shall be under no obligation to purchase or to broker the purchase back from you of your cryptocurrency in circumstances where there is no viable market for the purchase of the same.
